Abstract (en)

[origin: EP0012030A1] A connecting device for interconnecting components such as drawer wall panels at right angles to one another has the respective projections (5,6) extend at right angles to one panels to be interconnected, the respective projections (5,6) which engage with the panels being carried on separate parts of the connecting device which may be interengaged so that the respective projections (5,6) extend at right angles to one another. In this way the connecting device may be supplied in separable parts which can be packed flat, the parts being interengaged during assembly of the drawer or other article so that the projections and the wall panels or other components engaged therewith extend at right angles to one another.
