Abstract (en)  
[origin: EP0012141A1] A control unit braking apparatus has a housing (6) in which a shaft (4) is rotatably supported and is capable of axial movement, has one end of the shaft (4) projecting from the housing (6) and connected to a control member (40). The braking apparatus incorporates a friction member (24) mounted on the end of the shaft (4) and urged by a spring (20) positioned between the housing (6) and the friction member (24) against the control member to effect a braking action. The braking apparatus prevents throttle creep when the unit is applied to the control of a gear selection and throttle operating mechanism operated by a single lever.
