Abstract (en)  
[origin: EP0012142A1] Control unit adjustable interlock apparatus in a control unit which includes a housing (6) through which a rotatable and axially movable shaft (4) projects has a collar (70) located in the housing (6) which collar (70) surrounds the shaft (4) and which has a notch (100) capable of being engaged by engaging means (80) associated with a member (78) rotatable with the shaft (4) to interlock the shaft. The collar (70) has a section which has serrations (110) which enable the collar (70) to be fitted on to a retainer plate (72) in a plurality of positions. The invention enables the shaft of the unit to be selectively interlocked and also makes it possible for the collar to be adjusted relative to the retaining plate so that the position where the interlock becomes effective is also adjustable.
