Abstract (en)
[origin: EP0012187A1] 1. A delivery arrangement of a vending machine, more especially a push-button operated vending machine, for cartons stacked in stacking columns (10, 11) in which for each stacking column (10, 11) there is provided a corresponding delivery ejector (7), whereby in each case the lowest carton is supported on not more than three supports (16, 24, 28) provided at respective corner regions of the stacking column (10, 11) and is turned by means of a guide arrangement (26) towards that corner region of the stacking column (10, 11) in which no support is provided, as a result of ejection movement of the delivery ejector (7) transversely to the direction of stacking, characterized in that the guide arrangement (26) comprises a guide surface (32) aligned at an angle to the direction of linear shifting movement of the ejector member (7) and arranged at a corner region of the stacking column (10, 11) which is remote from the engagement side of the ejector member (7) and to which that corner region not provided with a support is adjacent.
