Abstract (en)
[origin: EP0013999A1] 1. A hinge, in particular for molded shell suitcases, the shell edge of which is located in the separating plane and is disposed within the outer bulge contour, comprising two hinge plates (2, 3 ; 33, 34 ; 37, 38) adapted to be applied each to a pivotable part (12, 13) and each comprising two parallel hinge axes (A, B) offset with respect to each other and hingedly interconnected by at least two bridge members (4, 5, 6 ; 31, 32 ; 35, 36) which are disposed beside each other in axial direction, characterized in that, with the hinge in stretched condition, the hinge plates (2, 3 ; 33, 34 ; 37, 38) and the bridge members (4, 5, 6 ; 31, 32 ; 35, 36) lie in a common hinge plane and the hinge axes 5A, B) of the bridge members lie in a plane parallel to said common hinge plane.
