Abstract (en)

[origin: US4268752A] An optical arrangement for a passive infrared motion detector which has an infrared detector unit and a system for directing infrared radiation from at least two separate directions to be monitored onto the detector unit characterized by the system including a single focusing device and separate, flat reflecting surfaces or directing mirrors, which are arranged with at least one flat reflecting surface associated with each direction to be monitored to reflect a beam or solid angle of radiation from the direction onto the single focusing device which device will focus the radiation along a folded beam path to the detector unit.

Abstract (de)

Bei einer optischen Anordnung für einen passiven Infrarot-Bewegungsmelder wird vorgeschlagen, funktionell die Strahlenaufteilung (4 bis 10) für mehrere Sichtfelder und die Fokussierung (2,3) auf einen Detektor (1) zu trennen. Dadurch vermeidet die Strahlenaufteilung Überschneidungen der Strahlenbündel.
