Abstract (en)
[origin: WO7901094A1] A container (10) having an articulated closure for an opening (13) in the lid (11) in which one end (14) of the closure is mounted on the lid adjacent the inner end of the opening, a closure element (15) is hinged to the mounted end and overlies the opening to seal the contents and a lift element (17) is integrally formed on the closure element opposite the mounted end to lift the closure element pivotally relative to the mounted end to provide access to the opening for the discharge of contents of the container.
