Abstract (en)
[origin: EP0015358A1] 1. A draw-in apparatus for a strip-processing plant comprising a gripping device (1), which is movable in the drawing-in direction and serves to grip the leading end of the strip and consists of two gripping jaws (2, 3), which are adapted to be forced against each other by a tightener, and actuators (11), which are provided along the path of the gripping device and serve to actuate the tightener, characterized in that the gripping jaws (2, 3) are interconnected like pliers and one of them is composed of a plurality of gripping members (6), which are mounted independently of each other and individually spring-biased in a closing sense, and that the gripping jaws (2, 3) are adapted to be loaded against the spring force by the actuators (11) in an opening sense.
