Abstract (en)
[origin: EP0015590A1] 1. Casing for a portable apparatus for reproducing acoustic stereo signals, comprising parts which are fixed to one another and horizontally displaceable relative to one another for receiving loudspeakers, one of the parts containing a radio receiver or the like, characterized in that the casing is formed from only two parts, (2, 3) which, at horizontally opposite ends, are in each case constructed in a chamfered lateral surface with a device for receiving a loudspeaker system (4, 12), and that the first and second parts (2, 3) can be moved over one another in such a way that the front surface (16) of the first part (2) is completely or almost completely covered by the rear surface (14) of the second part (3).
