Abstract (en)

[origin: US4317269A] An assembly for revaporizing liquefied gases. The arrangement is of the running water type and includes a nest of tubes (1) preferably grouped to form panels and connected to inlet and outlet manifolds and over which water is caused to flow. To withstand the corrosion of salt water, an A-G4MC alloy is used and the cross-section of each tube 1 includes two diametrically opposite outer fins 2,3 and inner fins 5. Said tube is produced preferably by extrusion. Application to vaporization of natural gas.
