Abstract (en)

[origin: ES488669A1] A method for manufacturing a woven band having novel yarn patterns by crosswise motion and hooking of warp threads on or within the stitch selvedge of an elastic rigid woven band. A thrower 3 includes a means for hooking and transversely shifting one or more warp threads and/or one or more intermediate yarns in the direction of the warp threads to the body of the article being made. The shifting of one of these yarns is effected in accordance with a pre-determined cycle. The yarns are thereafter either meshed or inserted within the mesh to obtain embroidery effects or runproof products.
