Abstract (en)

[origin: WO7901123A1] A package is disclosed for containing electrical components which are susceptible to static electrical charges. The package comprises a tubular member (2) of substantially uniform closed cross-section. The tubular member (2) has walls which define internally a portion (4) for supporting the body (5) of a dual-in-line package and two regions (6) to receive a row of pins (7) of the package. The walls around the two regions (6) being electrically conductive and the wall (8) which covers the top of the package being transparent.

Abstract (fr)

Boitier contenant des composants electriques qui sont sensibles aux charges electriques statiques. Le boitier consiste en un element tubulaire (2) de section fermee sensiblement uniforme. L'element tubulaire (2) possede des parois qui definissent interieurement une partie (4) qui supporte le corps (5) d'un boitier a double rangee de connexions et deux regions (6) qui recoivent chacune une rangee de fiches (7) du boitier. Les parois autour des deux regions (6) sont electriquement conductrices et la paroi (8) qui recouvre le dessus du boitier est transparente.
