Abstract (en)

[origin: WO8000011A1] A sprayer which may securely check air flow into a pressure chamber (7) of a pumping mechanism (2) so as to intake only liquid at any one of standing and overturning attitudes. According to this invention, a conventional pumping mechanism (2) is provided with an overturning-intake passage (15) which is opened at one end thereof to the pressure chamber (7) and at the other end to the external top of the pumping mechanism (2). The overturning-intake passage (15) has an on-off control valve (13A) which may be opened when the pressure in chamber (7) becomes higher than predetermined negative pressure at its overturning attitude.
