Abstract (en)
[origin: EP0016848A1] 1. Container consisting of a one-piece blank of cardboard, pasteboard, plastics or the like, particularly a folding box, with an elongated container body forming the side walls (2, 3, 4) of the container, which body is formed from the blank by connecting two opposite blank longitudinal edges, with a quadrangular end face (1) at one container end, from which end face the side walls (2, 3, 4) converge to form a narrow container closure at the other container end, in which case from two diametrically opposed corners (6, 7) of the end face (1) respectively one main folding edge (8, 9) extends rectilinearly to a point of intersection (10, 11) on the narrow container terminal (5) and from the two other diametrically opposed corners (19) of the end face (1) respectively two secondary folding edges (20, 21) originate, characterised in that the two secondary folding edges (20, 21) on the erected container are respectively bent relative to a folding edge (22, 23, 24, 25, 33) extending outwards towards the points of intersection (10, 11) of the main folding edges (8, 9) with the narrow container terminal (5).
