Abstract (en)

[origin: EP0016958A1] 1. Frame profile for a window, a door or the like, consisting of an inner element (1) which is towards the interior of the room, and, adapted to be interlocked with or plugged into it for connection purposes, an outer element (2) and at least one rail (3), the inner element (1) consisting of a material of poorer heat conductivity than the outer element (2), characterised in that the inner element (1) is constructed as a screwless intermediate member between the outer element (2) and the rail (2) and in that the rail (3) is connected to the inner element (1) by a snap-action or by a clamping or interlocking action.
