Abstract (en)
[origin: US4317026A] This invention relates to an improvement in a developing chamber for developing a photographic recording material for use in the vesicular method, comprising a housing and pairs of feed and discharge rolls therein, the improvement comprising at least two heatable metal blocks within said housing at an adjustable distance with respect to each other, whereby a gap for passage of recording material is provided, sliding enhancing material means on areas of the blocks facing the gap, the sliding enhancing material means being inert to the recording material, and temperature control means ensuring low temperature variations in the blocks.
