Abstract (en)
[origin: EP0017643A1] 1. A scrap press for compacting particularly coiled sheet metal elements (13) comprising a die (4), which is mounted in a press frame and receives the sheet metal elements in a recess, and a press punch (2), which is adapted to be forced against the recess (5) in the die, characterized in that the die (4) is mounted in the press frame (1) for rotation about a horizontal axis, which extends in the longitudinal direction of the recess (5), which has two longitudinal boundary surfaces, which include an angle with each other, the die is pivotally movable between two angular positions, and the bisector of the included angle of the recess (5) in the die extends approximately in the direction in which the press punch (2) is displaceable in one of said positions and approximately transversely thereto in the other of said positions.
