Abstract (en)

[origin: EP0017647A1] 1. Load-bearing, surface composing section element (1) of sheet or plate, in particular roof element for the production of hall roofs, comprising two outer supporting flanges (2, 2'), two webs (3, 3') departing therefrom, and an upper chord (4) connecting the webs (3, 3'), which upper chord has transverse engravings (5) arranged at a distance from one another transverse to the longitudinal extension of the element (1), characterized in that between two transverse engravings (5) each, of the upper chord (4), a corner engraving (7, 7') extending transverse to the longitudinal extension is each provided on both edges (6, 6') on the upper chord (4) and on the lateral webs (3, 3'), reaching about the edges (6, 6'), whose engraved rear wall is angled, wherein the transverse engravings (5) in the upper chord (4) end at a predetermined distance (11) from the webs (3, 3'), whereas the ends of the corner engravings (7, 7') extending into the upper chord (4) reach behind the transverse engravings (5).
