Abstract (en)

[origin: EP0017969A2] 1. Noncombustible thermal-insulation layer with surface coating, to be applied externally to buildings or industrial facilities, in the form of rolls or sheets consisting of glass-fibre or mineral-fibre laminations (4) in which the direction of the fibres is set perpendicular to the surface, wherein said fibre laminations (4) are connected by at least one wide-mesh fabric (5) on the surface, the connection of the fabric (5) to the laminations (4) being by means of adhesive (6) which is applied only along the fabric threads (5) so that the spaces between the fabric threads (5) are not covered by the adhesive, the thermal-insulation layer being installed such that the wide-mesh fabric (5) is on the outside of the building or facility.
