Abstract (en)

Electrically insulating connection between the ends of two rails by means of two steel fish plates (3, 4) clamped against the rail ends on either side by clamping means, a cold-hardening plastics paste being provided between the fishplates and the rail and each fishplate on the side remote from the rails being provided with an electrically insulating shell (9, 12), consisting of one or more parts and which engages around the top and bottom of the fishplate, the thickness of the shell edge portion engaging around the fishplate corresponding in the clamped condition with the thickness of the layer of plastic paste.
