Abstract (en)

An apparatus for applying bag closures is disclosed. The apparatus comprises first means for cutting of a closure (39) from a strand of closures being advanced through the apparatus by, a second means. In one embodiment, the first and second means are pneumatic piston and cylinder means (44, 30). The apparatus is particularly adapted to apply closures having a handle portion an intermediate portion and a curled end portion forming a bag-receiving opening with an entry throat leading into the bag-receiving opening.
