Abstract (en)

[origin: EP0018356A1] 1. Method of moist stacking shaped articles (5) consisting of gradually hardening, hydraulically compounded material as concrete in the course of which shaped articles applied in groups or single on underlays (2) are transported by a conveyor (4) immediately after moulding to a depot and are there stacked in longitudinal, parallel, abreast and superimposedly arranged hosts in a stack and stored until at least partially hardened, characterized by the fact that the hosts forming shaped articles (5) making up the stack (6) are within this stack enclosed in climatic chambers forming covers (Fig. 2-6) and that the directly superimposed hosts of shaped articles within this stack are applied on these covers.
