Abstract (en)

[origin: EP0019841A1] 1. A spring-operated swing door (1) having a pair of tension spring arms whose fastening to the swing door (1), at a surround or at the door plate facing the swivel axis (4) of the swing door (1), is positioned towards the inside, the tension spring arm pair being arranged on a roll (12) in a manner such that the swing door (1) is biased in the direction of closure, and the tension spring arms (10, 11) comprising the tension spring arm pair having recesses in which the roll (12) engages when the swing door is at rest, characterised in that a) a spring (7), acting as a door closer, is provided, which acts against the tension spring arms (10, 11), b) the tension spring arms (10, 11) extend outwards beyond their recesses and c) the fastening of the tension spring arms (10, 11) is provided as rotation-fastening at the swivel axis (6) of the door closer, which is positioned between the swivel axis (4) of the swing door (1) and the roll (12).
