Abstract (en)  
[origin: EP0020166A1] A collapsible binder or the like, which is self-sustaining in a predetermined configuration when unfolded and extended to sit upon a flat surface, comprises an elongate central panel (18) flanked by a pair of generally quadrilateral flanking side panels (20, 22) with a rearwardly located collapsible support having an upstanding elongate rear central panel (34) flanked by a first pair of upstanding rear-side panels (44, 46) of substantially right-angled triangular configuration the latter side panels terminating along their respective hypotenuses remote from said upstanding rear central panel in a second pair respectively of flanking side panels (48, 50) extending in coplanar relation behind the flanking side panels of said binder, and slidingly fixed thereto; and with all panels being so hingedly connected together that the structure may upon being unfolded extend into its self-sustaining predetermined configuration and may be compactly folded up when collapsed for storage or for carrying.
