Abstract (en)

1. A machine for the assembly of fins (2) and tubes (41) for heat exchangers or radiators in particular comprising a continuous dispensing press (1) of fins ready for assembly which are then taken up by a transfer system (3, 5) supplying a stacking station (P), which fins are then subjected to an interspacing control system with combs (35) before the fitting of tubes (41), characterised in that the transfer system (5) has a discontinuous movement, that this transfer system alternately supplies at least two stacking stations (P1 , P2), that a movable carriage (20) which may be displaced horizontally below each stacking station and transversely to the said transfer system ensures the reception of fins (2), that the movable carriage ensures the release of the block of fins made and that these various continuous or discontinuous movements are ensured on the basis of one and the same motor mechanism at the press outlet by chain drive (5), shafts (54), bevel gears (53, 55) and cams operating the jacks.

Abstract (fr)

La machine comporte successivement, un dispositif de transfert d'ailettes découpées sortant de presse en continu sur un transporteur à mouvement discontinu (5) un mécanisme à tiroirs libérant les pièces dans au moins un poste d'empilement, un sous-ensemble à chariot mobile (20) recevant l'empilement d'ailettes, un dispositif (34) de contrôle d'écartement à peignes, un mécanisme d'alimentation de tubes et d'emmanchement de tubes dans les ailettes. Application à la réalisation de blocs à ailettes pour échangeurs d'appareils de chauffage au gaz.
