Abstract (en)

[origin: WO8000982A1] A tubular inner ring (12) is positioned at a small distance (a) from a spinning ring (3) for a spinning or remodelling frame. The upper surface (13) of the ring (12) extends beyond the guiding surface (10) of the traveller by a distance (h) such that the thread (8), which is not under tension anymore, cannot come out of the traveller (6). Further, it is desired to choose the distance (a) which separates the upper outer angle (14) From the inner ring of the guiding surface (10) of the traveller (6) so that the traveller (6) does not run into the inner ring (12) when re-starting the wind.
