Abstract (en)

[origin: WO8001089A1] A dimensionally stable wood flooring highly resistant to deterioration because of variations in environmental humidity and temperature employs individual wood fillets (18) separated by a highly compressible and flexible synthetic foam spacer (26) that accommodates relatively large fillet dimensional changes to span the inter-fillet gaps (30) continually.

Abstract (fr)

Un plancher en bois de dimensions stables tres resistant a la deterioration due aux variations de l'humidite et de la temperature ambiantes utilise des baguettes en bois individuelles (18) separees par un element d'espacement en mousse synthetique flexible hautement compressible (26) qui s'adapte aux variations relativement importantes des dimensions des baguettes pour remplir continuellement les espaces (30) entre celles-ci.
