Abstract (en)
[origin: EP0021164A1] 1. A ventillation device for installation in window or door frame, comprising a tube mounting means which is apertured transversely to its longitudinal direction, and a tube which is arranged rotatably therein and which is provided in its central plane with an air through-flow opening characterized in that the tube mounting means is formed from two partial shell members (10) which are arranged in mirror image relationship with each other and which comprise shaped plastics members (4, 4a) which are of the same cross-section and which are provided with lugs for positively mounting on the one hand a weather board member (1) and on the other hand an ornamental grill (3), a plate grill (29) or the like, and that the rotatable tube (12) also comprises two partial shell members (13) which comprise extruded metal members and which are joined together by shaped members (14, 14a) made from plastics material.
