Abstract (en)

[origin: EP0021172A1] A water level control device for flush toilets comprises a body (1) associable with the flushing tank of a flush toilet and defining a chamber therein, in communication with a water inlet conduit (4). In the chamber there is housed a shutter operative to cover or uncover a water inlet port, as respectively controlled by level adjusting members (20, 22) and by an opening weight (30) adapted for moving the shutter to the port uncovering position when the water in the tank is at a lower level than a preset one.
