Abstract (en)
[origin: EP0021191A2] (for the contracting States : BE, FR, GB, IT, NL, SE) 1. Cushion pad of plastics materials for seat furniture and vehicle seats, of which the stress-bearing surface has elevations (7) of differing geometry, between which free spaces are present, wherein the elevations (7) form one piece with a common supporting slab (1) of the same material, characterized in that the material is foamed in a mould ; in that the supporting slab (1) represents the actual cushion pad ; in that the height of the elevations (7) is small in relation to the height of this cushion pad (1) and in that the distribution of the elevations (7) of differing geometry corresponds to the differing areas of stress (4, 5, 6) of the cushion pad. (for the contracting State DE) 1. Use of a cushion pad formed in a mould, of which the stress-bearing surface has elevations (7) of differing geometry moulded on to it, between which elevations free spaces are present, wherein these elevations (7) form one piece with the actual cushion pad (1) and the height of the elevations (7) is small in relation to the height of the actual cushion pad (1) and the distribution of the elevations (7) with respect to their differing geometry corresponds to the differing areas of stress (4, 5, 6) of the cushion pad (1), for vehicle seats.
