Abstract (en)
A method of manufacturing a ground coating, for example a road or talus coating, matresses and the like on the basis of a woven mat (1) of preferably synthetic warp and weft wires, bounding means being fastened to the mat for applying to one side of the mat casting and curalbe material such as bitumen or concrete (3), wherein at least one tissue-foreign wire is passed from the other side of the mat at two or more places across the tissue to form loops (2), the curable material being poured on siad loops.
