Abstract (en)  
[origin: EP0022153A1] 1. Process for the manufacture of a decorative finished-effect film based on carrier webs made of paper, which contain, in the paper, condensation resins and additionally, if appropriate, polymerisation resins, uniformly distributed and in an amount adequate for achieving delamination resistance, these carrier webs being coated or printed with an acrylate resin, which may or may not be curable, and the coated carrier webs then being heated until they reach a Darr value of  $\leq 6\%$  by weight, characterized in that the carrier webs thus obtained are printed by means of metered roller application, with 2 to 10 g (expressed as solid resin)/m<sup>2</sup> of a solution of a finishing lacquer consisting of nitrocellulose lacquer or of an acid-curing nitrocellulose-containing lacquer.
