Abstract (en)
[origin: EP0022879A1] 1. A dish-washing machine, in particular for domestic use, in which a flow pipe (6) carrying a stream of washing fluid during the washing operation is coaxially disposed within a further flow pipe (12) wherein the flow pipe (12) is provided with a coaxial tubular heater (11), so that an air stream for drying the dishes, flowing through the annular space between both flow pipes (6, 12), is heated, characterized in that the flow pipes (6, 12) and the tubular heater (11) are disposed below the bottom of the container (1) receiving the dishes, in such manner that the tubular heater (11) is located within the annular space, carrying the air stream, between both flow pipes (6, 12) and also heats the flow pipe (6) carrying the stream of washing fluid.
