Abstract (en)

[origin: EP0023166A2] Display device of the type comprising a panel wherein grooves are provided to fixe removable signs. The hooking means (7) of the small plates (5 and 6) on which the signs are reproduced are comprised of ribs slightly diverging from their base and of which the apex have the shape of hooks. Due to the relative resilience of the constituent material, the setting in place or the removal of a small plate is easily effected. A notch (27) facilitates the removal and provides for a reference means for the sign direction. The ends of the panels (2 and 3) are provided so that they may be superposed by jointing (4) and made integral by any known means. Applications: signalling and information at any public place (train stations, airports, theatres, restaurants, hospitals, offices, etc... and private place (commercial and industrial premises, etc...).
