Abstract (en)
[origin: WO8001553A1] Transport device, e.g. for tracks and trailers, said transport device comprising two loading planes, one of which being arranged above the other and being vertically adjustable relative to said other plane, which constitutes the platform or the container bottom. The purpose of the invention is to provide a transport device, which is very flexible with respect to different types of transport goods and which can be loaded by means of a fork track or similar on both loading planes. This has been achieved by the fact that the roof structure (29) is vertically displaceable (29) relative to the platform (11) or the container bottom, so that when the upper loading plane (15) is fully loaded it is elevated to a level, which gives clearance height permitting a fork track to pass on the platform or the container bottom below the upper loading plane.

Abstract (fr)
Un dispositif de transport, p.ex. pour camions et remorques, comprend deux plans de chargement, l'un etant dispose au dessus de l'autre et etant réglable verticalement par rapport a l'autre plan, qui constitue la plate-forme ou le fond du conteneur. Le but est de fournir un dispositif de transport qui soit tres adaptable aux differents types de marchandises de transport et qui puisse etre charge au moyen d'un vehicule de levage a fourche sur les deux plans de chargement. Ce resultat a ete obtenu par le fait que la structure du toit (29) est deplacable verticalement (29) par rapport a la plateforme (11) ou le fond du conteneur, de sorte que lorsque le plan de chargement superieur (15) est entierement charge il est eleve a un niveau qui donne une hauteur de degagement permettant a un vehicule de levage a fourche de passer sur la plateforme ou le fond du conteneur sous le plan de chargement superieur.
