Abstract (en)
[origin: US4406524A] The afocal optical device is a removable accessory intended to be placed on an objective for taking pictures in the air as well as in water in order to reduce the focal length without modification of the focussing. In a preferred embodiment it comprises a frontal diverging group (G1) having two diverging lenses (A, B), and a positive rear group (G2) formed of two converging lenses (C, D).
