Abstract (en)
[origin: US4359073A] A mobile station for the distribution of beverages is mounted on a truck and comprises two reservoirs for beverages and a reservoir for sterilized water. Automatic distributors are fed by the beverage reservoir; while the water reservoir feeds apparatus for washing and sterilizing the cups. A drawer stores the cups in stacked relation. Troughs beneath the automatic distributors and below the apparatus for washing and sterilizing cups, catch the liquids that would otherwise fall to the ground and return them to a recovery vessel from which the liquids may be drained. Vertically swinging canopies protect the equipment in transit and, when swung up, serve as awnings for the users.

Abstract (fr)
La station, montée sur une camionnette (1), comporte deux réservoirs (3, 4) de boissons et un réservoir (19) d'eau stérilisée. Des distributeurs (9,10) automatiques sont alimentés par les réservoirs (3,4) tandis que le réservoir (19) alimente des dispositifs de lavage et de stérilisation de gobelets. Un tiroir (31) permet de ranger les gobelets. La station est utilisée pour la distribution gratuite ou payante de boissons dans les écoles ou lors de manifestations sportives.
