Abstract (en)

[origin: EP0024750A2] 1. Process for the opening of heat-formed alveolate packs whether defective or otherwise, in particular for pharmaceutical products, and the simultaneous recuperation of the objects packed, according to which the alveolate packs are stocked with the alveolates facing upwards in a magazine, they are expelled one by one from the base of the magazine, and the objects packed are extracted from the packing, characterised by the fact that said extraction is carried out by a press consisting of a die and punches, and that, after extraction, the punches are lifted and carry away with them the emptied pack, the emptied pack being then ejected from the punches by knocking against an organ of retention.
