Abstract (en)

[origin: EP0024981A1] An electrical connector comprises a male tab (1) and a female clip (3). When the tab is inserted into the clip (3), an elastically deformable portion (5a, 9) of the clip engages the tab and the projection (9) enters an opening in the tab, thus locking the tab and clip (3) together. To release the tab flange 5a is engaged with a sloping abutment of a suitable insulating housing (shown in outline) and the projection (9) is elastically deformed downwards. <IMAGE>
