Abstract (en)

[origin: EP0025886A1] 1. Device for adjusting the fountain blade of an inking device of a printing machine co-operating with a roller, with several inking zone adjusting pins arranged to be distributed over the width of the fountain blade and axially movable for blade adjustment, and an indicating device for the adjustment of the fountain blade, characterised in that each inking zone adjusting pin (10) has an axially running bore and the bore receives a measuring pin (14), against one end of which a measurement value transmission element (20) of the indicating device is guided under the effect of a spring (23), and the other end of which scans the position of the fountain blade (18).
