Abstract (en)

[origin: EP0026055A1] According to the invention there is provided a bag-like container (11), for a bag-in-a-box package for the storage and dispensing of liquids such as wine, saki and milk, the bag-like container incorporating a filling-and-dispensing neck (14) having a passageway (20) through which liquid may be caused to flow into the container and through which liquid may be dispensed, and a closure (23) engaged with that neck to close the passageway. The closure has means (30, 35) for engagement by a dispensing tap of known type and a frangible diaphragm (34) across part at least of the closure to close the passageway (20) against flow of liquid therethrough, said diaphragm (34) being engageable and adapted to be fractured by said dispensing tap when said tap is engaged firmly with the closure so as to permit flow of liquid from said container through said closure.
