Abstract (en)

[origin: EP0026155A1] 1. A method of checking the presence of wrapping bands on soft bodies such as skeins of wool or the like, characterized in that the skein (1) is guided and conveyed between two moving faces and during conveyance is compressed transversely of the direction of conveyance and in the direction of its longitudinal axis (3), any changes in the dimensions of the coil (1) that may occur during this procedure are measured transversely of the direction in which pressure is applied, and the measured value is compared with a required value, whereupon skeins (1) deviating from the required value are removed from the conveying path.
