Abstract (en)

[origin: EP0026232A1] Video-game display method presents a ball by four points (P, Q, S, T) defining e.g. a square, identified by x, y axis coordinates ($P = x_1y_1$, $Q = x_2y_1$, $S = x_1y_2$, $T = x_2y_2$). As well as representing straight wall rebound it can represent rebound from corners or curved surfaces as occurring when only one point P, Q, S, or T strikes an obstacle. Rebound of displayed ball from corners or curved surfaces appears more natural.
