Abstract (en)
[origin: EP0026512A2] A wall building block in the form of a horizontal or vertical coring block is provided with a peripheral joint (5) running essentially parallel to the plane of the wall, wherein, for a thermally and acoustically favourable design, the block masses to the right and to the left of this joint (5) are distributed unevenly and the lamellar webs (1) have varying wall thicknesses. The surfaces of the webs (1) are corrugated or provided with ribs (9). In the case of the design as a horizontal coring block, a cavity which is filled with sound- and/or heat-insulating materials and can also be divided by webs (8) is provided in the plane of the peripheral joint (5). <IMAGE>
