Abstract (en)

[origin: EP0026712A1] 1. Device for opening and closing the doors of a vehicle with sliding walls (1, 19), possessing a longitudinal running rail (8) fastened to the side of the vehicle on which are located the sliding walls, under the floor (5) of the said vehicle and set back relative to the outer contour of the latter, with the doors closed, and also possessing at least one accessory device (9) which is removable and independent of the vehicle and which is equipped with means (14) for rigid connection to each sliding wall, means (11, 12, 13) enabling it to slide on the said rail, whilst ensuring that each wall is maintained in a vertical position and supported, and means (16) making it possible to operate the said wall in such a way as to raise it, whilst displacing it sideways out of its frame, and vice versa.
