Abstract (en)
[origin: EP0027527A1] 1. Magazine for flat packing blanks (2), which are transported by means of at least two band conveyors (15), arranged at opposite sides of the blanks (2) and being positioned at a distance between each other which is a little bit smaller than the corresponding width of the blanks (2), towards an end of the magazine, wherein the band conveyors (15) are operable in dependence of the transport operation, characterized in that a stop (14) each is related to the band conveyors (15) and that the band conveyors (15) are separately switched ineffective, in order to avoid an oblique position of the blanks (2) at the end of the magazine, when the stack section corresponding to the band conveyor (15) effects a force on the corresponding stop (14) which exerts a predetermined pressure force.
