Abstract (en)

A flexible dispenser for dispensing the top sheet of flexible material from a sheaf or pile, comprising an anchor (11) for anchoring the dispenser, for example, in the form of a flange (11) to be interposed between the top edge of a sheaf of paper (17) and the front wall (20) of a receptacle (19) containing such paper, and a flexible or partially flexible relatively elongate dispensing member (10) as such dispenser extending over the top sheet of paper (17) and provided near its bottom edge with friction gripping substance (13) on the top and bottom surfaces whereby when the dispensing member (10) is moved rearwardly away from the point of ultimate emission of the paper, it will bow into a convex configuration causing the top sheet of paper (17) to assume a similar configuration causing it to lift away from the remainder of the material in the sheaf and become available to be grasped for removal from the receptacle (19).
