Abstract (en)
[origin: EP0027859A1] 1. Device for depositing individual sheets, separated from a feed stack via a paper cutting device, on to a paper depository surface (8) wherein the paper is conducted via a paper guide (4, 5) on a vertical paper path, and wherein a cutting vehicle (3) is provided which can be moved transversely to the paper path and which, in order to cut and deposit the paper via a coulisse (6) permanently connected to the paper guide (4, 5), pivots the paper guide (4, 5) out of the rest position in the direction of the paper depository surface (8) characterised in that in the outlet zone of the paper guide (4, 5) on that part (4) of the paper guide which faces towards the paper depository surface (8) there is mounted a depository bracket (18) which, when the paper guide (4, 5) moves out of the rest position in the direction of the paper depository surface (8), additionally pivots the sheet of paper to be cut and deposited in the direction of the paper depository surface (8).
