Abstract (en)

In an apparatus for packaging especially a compressed stack of mineral wool mats (23) in a bag or a sack (9), provision has been made, in view of reducing the manual work required, of a fully automatic mechanism for opening the flat-folded bags and drawing them on to a packaging beak (19) through which the material can be pushed forward to the bottom of the bag. This mechanism comprises a set of holders (6,7) with grippers (13) for temporarily grasping the flat-folded bag (9) and enlarging the open end of said bag by increasing the space between the holders, and for drawing the bag on to the packaging beak (19). While this bag is filled, the next bag can be received by the holders to be ready for filling as soon as the first bag has been removed from the packaging beak.
