Abstract (en)
[origin: EP0028690A1] 1. Supporting element for use with medical support apparatus, with a filling comprising a mixture of foam plastic elements and solid synthetic plastic material beads, characterised in that the foam plastic elements used are per se known small polygonal rods of polyether foam all of whose side surfaces are as if formed by cutting, and approximately 50% by volume of small polygonal rods and approx. 50% by volume of beads constitute the preferred mixture ratio, and the total filling volume of the supporting element amounts to 70 to 80%.
